Sommario/riassunto	This book has reviewed the research undertaken on a broad range of reproductive health issues and their mental health determinants/consequences over the last 15 years from both high- and low-income countries. Evidence from peer-reviewed journals has been used wherever possible but has been augmented with results of a specific survey initiated to gather state of the art information on reproductive and mental health issues from a variety of researchers and interested parties. Valuable data from consultant reports, national programme evaluations and postgraduate research work was also compiled, a

Descrizione fisica	1 online resource (130 p.)
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	<p>In this anthology of its groundbreaking articles, <i>Science News</i> brings us a riveting look at the mystery of human consciousness. Despite advances in neuroscience that have allowed us to peer into the inner workings of the brain, a deeper understanding of the mind remains elusive. From early attempts to pinpoint the exact location of consciousness to today's ongoing explorations of communications between nerve cells, scientists have wrestled with how to define such a nebulous concept. The articles in this book, curated from the extensive <i>Science News</i> archive, explore the ways science attempts to explain consciousness. Studies of perception, both normal and altered, contribute to our understanding, and research on nonhuman consciousness offer insights and depth. The collection leaves us with profound and poignant questions: Is the concept of conscious decision-making an illusion? And do humans truly possess free will? Since 1921, Society for Science & the Public has facilitated global understanding of important scientific discoveries and issues. Since the first publication of the <i>Science News-Letter</i> in 1922, they have grown their audience to millions of readers each year. Now, <i>Science News</i> exposes new readers to thrilling concepts and innovative theories in Consciousness.</p>
