| Sommario/riassunto      | Presidential candidates are a breed apart, often propelled by traits that have shaped their careers and have deep roots in personal histories. Often their greatest strength can turn at supernova speed into their |

greatest weakness. The exact qualities that set them apart from the field trip them up eventually over the long haul of a presidential campaign. Hillary Clinton's won't-back-down resolve is the quality that could make her America's first female president if it doesn't sabotage her first. She may have gotten her first campaign for the Democratic nomination wrong, but now she is doggedly determined to get it right. But that past campaign and her controversial years as first lady, while leaving her with more experience with the nuts and bolts of being president, have also left a trail of ethical questions that provide her challengers ample ammunition on the trail. In this series of eBooks, The Washington Post is exploring in-depth all these key characteristics of the leading presidential contenders, the very characteristics that could help make one of them the country's next commander in chief--or forever sink their presidential ambitions.

Autore	Benndorf Jörg
Titolo	Closed Loop Management in Mineral Resource Extraction : Turning Online Geo-Data into Mining Intelligence / / by Jörg Benndorf
Pubbl/distr/stampa	Cham : , : Springer International Publishing : , : Imprint : Springer, , 2020
ISBN	3-030-40900-7
Edizione	[1st ed. 2020.]
Descrizione fisica	1 online resource (VIII, 104 p. 62 illus., 54 illus. in color.)
Collana	SpringerBriefs in Applied Sciences and Technology, , 2191-5318
Disciplina	622.068 622.0285
Soggetti	Cogeneration of electric power and heat Fossil fuels Geotechnical engineering Fossil Fuel Geotechnical Engineering and Applied Earth Sciences
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	A Closed-Loop System for Mineral Resource Extraction -- Real-Time

Updating of Resource and Grade Control Models -- Optimization of Short-term Mine Planning and Production Control -- The Value of Additional Information -- Final Remarks.

---

Sommario/riassunto

This book describes an innovative closed-loop concept that allows the feedback of online data from operational monitoring to create mining intelligence. The application of this concept promises significant improvements in economic and environmental key performance indicators for any mining operation. Combining theory with industrial case studies, the book guides readers through this process by providing theoretical background, addressing practical issues related to operational implementation, and illustrating the impact on selected examples. This new concept is presented using the example of a bulk and gold mining application, but is applicable at any mine where grade control is important. The book is of interest to industrial professionals involved in operational monitoring, mining intelligence, and mine planning optimization, as well as to researchers and academics in the field of applied geostatistics.
