

1. Record Nr.	UNINA9910150214303321
Autore	Kasap Safa
Titolo	Optoelectronics and photonics : principles and practices / / Safa O. Kasap, Ravindra Kumar Sinha
Pubbl/distr/stampa	Boston : , : Pearson, , 2013
ISBN	0-273-77418-2
Edizione	[Second edition, international edition.]
Descrizione fisica	1 online resource (551 pages) : illustrations, tables
Collana	Always Learning
Disciplina	621.381045
Soggetti	Optoelectronic devices
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Includes index.
Nota di contenuto	Cover -- Contents -- Chapter 1 Wave Nature of Light -- 1.1 Light Waves in a Homogeneous Medium -- A. Plane Electromagnetic Wave -- B. Maxwell's Wave Equation and Diverging Waves -- Example 1.1.1 A diverging laser beam -- 1.2 Refractive Index and Dispersion -- Example 1.2.1 Sellmeier equation and diamond -- Example 1.2.2 Cauchy equation and diamond -- 1.3 Group Velocity and Group Index -- Example 1.3.1 Group velocity -- Example 1.3.2 Group velocity and index -- Example 1.3.3 Group and phase velocities -- 1.4 Magnetic Field, Irradiance, and Poynting Vector -- Example 1.4.1 Electric and magnetic fields in light -- Example 1.4.2 Power and irradiance of a Gaussian beam -- 1.5 Snell's Law and Total Internal Reflection (TIR) -- Example 1.5.1 Beam displacement -- 1.6 Fresnel's Equations -- A. Amplitude Reflection and Transmission Coefficients (r and t) -- B. Intensity, Reflectance, and Transmittance -- C. Goos-Hanchen Shift and Optical Tunneling -- Example 1.6.1 Reflection of light from a less dense medium (internal reflection) -- Example 1.6.2 Reflection at normal incidence, and internal and external reflection -- Example 1.6.3 Reflection and transmission at the Brewster angle -- 1.7 Antireflection Coatings and Dielectric Mirrors -- A. Antireflection Coatings on Photodetectors and Solar Cells -- Example 1.7.1 Antireflection coating on a photodetector -- B. Dielectric Mirrors and Bragg Reflectors -- Example 1.7.2 Dielectric mirror -- 1.8 Absorption of Light and Complex Refractive Index -- Example 1.8.1 Complex refractive index of InP -- Example 1.8.2 Reflectance of CdTe around resonance

absorption -- 1.9 Temporal and Spatial Coherence -- Example 1.9.1
 Coherence length of LED light -- 1.10 Superposition and Interference
 of Waves -- 1.11 Multiple Interference and Optical Resonators.
 Example 1.11.1 Resonator modes and spectral width of a
 semiconductor Fabry-Perot cavity -- 1.12 Diffraction Principles -- A.
 Fraunhofer Diffraction -- Example 1.12.1 Resolving power of imaging
 systems -- B. Diffraction Grating -- Example 1.12.2 A reflection
 grating -- Additional topics -- 1.13 Interferometers -- 1.14 Thin Film
 Optics: Multiple Reflections in Thin Films -- Example 1.14.1 Thin film
 optics -- 1.15 Multiple Reflections in Plates and Incoherent Waves --
 1.16 Scattering of Light -- 1.17 Photonic Crystals -- Questions and
 Problems -- Chapter 2 Dielectric Waveguides and Optical Fibers -- 2.1
 Symmetric Planar Dielectric Slab Waveguide -- A. Waveguide Condition
 -- B. Single and Multimode Waveguides -- C. TE and TM Modes --
 Example 2.1.1 Waveguide modes -- Example 2.1.2 V-number and the
 number of modes -- Example 2.1.3 Mode field width, $2w_{\text{sub}(0)}$ -- 2.2
 Modal and Waveguide Dispersion in Planar Waveguides -- A. Waveguide
 Dispersion Diagram and Group Velocity -- B. Intermodal Dispersion --
 C. Intramodal Dispersion -- 2.3 Step-Index Optical Fiber -- A.
 Principles and Allowed Modes -- Example 2.3.1 A multimode fiber --
 Example 2.3.2 A single-mode fiber -- B. Mode Field Diameter --
 Example 2.3.3 Mode field diameter -- C. Propagation Constant and
 Group Velocity -- Example 2.3.4 Group velocity and delay -- D. Modal
 Dispersion in Multimode Step-Index Fibers -- Example 2.3.5 A
 multimode fiber and dispersion -- 2.4 Numerical Aperture -- Example
 2.4.1 A multimode fiber and total acceptance angle -- Example 2.4.2 A
 single-mode fiber -- 2.5 Dispersion In Single-Mode Fibers -- A.
 Material Dispersion -- B. Waveguide Dispersion -- C. Chromatic
 Dispersion -- D. Profile and Polarization Dispersion Effects -- Example
 2.5.1 Material dispersion -- Example 2.5.2 Material, waveguide, and
 chromatic dispersion.
 Example 2.5.3 Chromatic dispersion at different wavelengths --
 Example 2.5.4 Waveguide dispersion -- 2.6 Dispersion Modified Fibers
 and Compensation -- A. Dispersion Modified Fibers -- B. Dispersion
 Compensation -- Example 2.6.1 Dispersion compensation -- 2.7 Bit
 Rate, Dispersion, and Electrical and Optical Bandwidth -- A. Bit Rate
 and Dispersion -- B. Optical and Electrical Bandwidth -- Example 2.7.1
 Bit rate and dispersion for a single-mode fiber -- 2.8 The Graded Index
 (GRIN) Optical Fiber -- A. Basic Properties of GRIN Fibers -- B.
 Telecommunications -- Example 2.8.1 Dispersion in a graded index
 fiber and bit rate -- Example 2.8.2 Dispersion in a graded index fiber
 and bit rate -- 2.9 Attenuation in Optical Fibers -- A. Attenuation
 Coefficient and Optical Power Levels -- Example 2.9.1 Attenuation
 along an optical fiber -- B. Intrinsic Attenuation in Optical Fibers -- C.
 Intrinsic Attenuation Equations -- Example 2.9.2 Rayleigh scattering
 equations -- D. Bending losses -- Example 2.9.3 Bending loss for SMF
 -- 2.10 Fiber Manufacture -- A. Fiber Drawing -- B. Outside Vapor
 Deposition -- Example 2.10.1 Fiber drawing -- Additional topics --
 2.11 Wavelength Division Multiplexing: WDM -- 2.12 Nonlinear Effects
 in Optical Fibers and DWDM -- 2.13 Bragg Fibers -- 2.14 Photonic
 Crystal Fibers-Holey Fibers -- 2.15 Fiber Bragg Gratings and Sensors
 -- Example 2.15.1 Fiber Bragg grating at 1550 nm -- Questions and
 Problems -- Chapter 3 Semiconductor Science and Light-Emitting
 Diodes -- 3.1 Review of Semiconductor Concepts and Energy Bands --
 A. Energy Band Diagrams, Density of States, Fermi-Dirac Function and
 Metals -- B. Energy Band Diagrams of Semiconductors -- 3.2
 Semiconductor Statistics -- 3.3 Extrinsic Semiconductors -- A. n-Type
 and p-Type Semiconductors -- B. Compensation Doping -- C.

Nondegenerate and Degenerate Semiconductors.

D. Energy Band Diagrams in an Applied Field -- Example 3.3.1 Fermi levels in semiconductors -- Example 3.3.2 Conductivity of n-Si -- 3.4 Direct and Indirect Bandgap Semiconductors: E-k Diagrams -- 3.5 pn Junction Principles -- A. Open Circuit -- B. Forward Bias and the Shockley Diode Equation -- C. Minority Carrier Charge Stored in Forward Bias -- D. Recombination Current and the Total Current -- 3.6 pn Junction Reverse Current -- 3.7 pn Junction Dynamic Resistance and Capacitances -- A. Depletion Layer Capacitance -- B. Dynamic Resistance and Diffusion Capacitance for Small Signals -- 3.8 Recombination Lifetime -- A. Direct Recombination -- B. Indirect Recombination -- Example 3.8.1 A direct bandgap pn junction -- 3.9 pn Junction Band Diagram -- A. Open Circuit -- B. Forward and Reverse Bias -- Example 3.9.1 The built-in voltage from the band diagram -- 3.10 Heterojunctions -- 3.11 Light-Emitting Diodes: Principles -- A. Homostructure LEDs -- B. Heterostructure High Intensity LEDs -- C. Output Spectrum -- Example 3.11.1 LED spectral linewidth -- Example 3.11.2 LED spectral width -- Example 3.11.3 Dependence of the emission peak and linewidth on temperature -- 3.12 Quantum Well High Intensity LEDs -- Example 3.12.1 Energy levels in the quantum well -- 3.13 LED Materials and Structures -- A. LED Materials -- B. LED Structures -- Example 3.13.1 Light extraction from a bare LED chip -- 3.14 LED Efficiencies and Luminous Flux -- Example 3.14.1 LED efficiencies -- Example 3.14.2 LED brightness -- 3.15 Basic LED Characteristics -- 3.16 LEDs for Optical Fiber Communications -- 3.17 Phosphors and White LEDs -- Additional topics -- 3.18 LED Electronics -- Questions and Problems -- Chapter 4 Stimulated Emission Devices: Optical Amplifiers and Lasers -- 4.1 Stimulated Emission, Photon Amplification, and Lasers -- A. Stimulated Emission and Population Inversion. B. Photon Amplification and Laser Principles -- C. Four-Level Laser System -- 4.2 Stimulated Emission Rate and Emission Cross-Section -- A. Stimulated Emission and Einstein Coefficients -- Example 4.2.1 Minimum pumping power for three-level laser systems -- B. Emission and Absorption Cross-Sections -- Example 4.2.2 Gain coefficient in a Nd[Sup(3+)] -doped glass fiber -- 4.3 Erbium-Doped Fiber Amplifiers -- A. Principle of Operation and Amplifier Configurations -- B. EDFA Characteristics, Efficiency, and Gain Saturation -- Example 4.3.1 An erbium-doped fiber amplifier -- C. Gain-Flattened EDFAs and Noise Figure -- 4.4 Gas Lasers: The He-Ne Laser -- Example 4.4.1 Efficiency of the He-Ne laser -- 4.5 The Output Spectrum of a Gas Laser -- Example 4.5.1 Doppler broadened linewidth -- 4.6 Laser Oscillations: Threshold Gain Coefficient and Gain Bandwidth -- A. Optical Gain Coefficient g -- B. Threshold Gain Coefficient g_{th} and Output Power -- Example 4.6.1 Threshold population inversion for the He-Ne laser -- C. Output Power and Photon Lifetime in the Cavity -- Example 4.6.2 Output power and photon cavity lifetime T_{ph} -- D. Optical Cavity, Phase Condition, Laser Modes -- 4.7 Broadening of the Optical Gain Curve and Linewidth -- 4.8 Pulsed Lasers: Q-Switching and Mode Locking -- A. Q-Switching -- B. Mode Locking -- 4.9 Principle of the Laser Diode -- 4.10 Heterostructure Laser Diodes -- Example 4.10.1 Modes in a semiconductor laser and the optical cavity length -- 4.11 Quantum Well Devices -- Example 4.11.1 A GaAs quantum well -- 4.12 Elementary Laser Diode Characteristics -- Example 4.12.1 Laser output wavelength variation with temperature -- Example 4.12.2 Laser diode efficiencies for a sky-blue LD -- Example 4.12.3 Laser diode efficiencies -- 4.13 Steady State Semiconductor Rate Equations: The Laser Diode Equation -- A. Laser Diode Equation.

B. Optical Gain Curve, Threshold, and Transparency Conditions.

Sommario/riassunto

For one-semester, undergraduate-level courses in Optoelectronics and Photonics, in the departments of electrical engineering, engineering physics, and materials science and engineering. This text takes a fresh look at the enormous developments in electro-optic devices and associated materials-such as Pockels (Lithium Niobate) modulators.
