### Sommario/riassunto

This book draws on financial, economic, and management theory in its exploration of the theory underlying risk and risk management at both micro- and macroeconomic levels. It has a particular reference to the public financial sector. Chapters investigate the elimination of currency risk in the Transatlantic Trade and Investment Partnership (TTIP), as well as the changes that credit ratings undergo due to the influence of credit spreads. Featuring contributions on important topics such as public safety and the internet, intellectual capital, bank regulatory risk in the EU, the financial distress of public sector entities, and systemic risk in the insurance sector, it also explores innovative and emerging issues in the European tax gap in personal income taxes and VAT carousel fraud in selected European countries. Discussion of the complex nature of risk management in public administration will appeal to public officials, policy-makers, academics and researchers alike.
