| Sommario/riassunto | <p>This book provides a comprehensive introduction to the field of several complex variables in the setting of a very special but basic class of domains, the so-called Reinhardt domains. In this way the reader may learn much about this area without encountering too many technical difficulties. Chapter 1 describes the fundamental notions and the phenomenon of simultaneous holomorphic extension. Chapter 2 presents a fairly complete discussion of biholomorphisms of bounded (complete) Reinhardt domains in the two dimensional case. The third chapter gives a classification of Reinhardt domains of existence for the most important classes of holomorphic functions. The last chapter deals with invariant functions and gives explicit calculations of many of them on certain Reinhardt domains. Numerous exercises are included to help the readers with their understanding of the material. Further results and open problems are added which may be useful as seminar topics. The primary aim of this book is to introduce students or non-experts to some of the main research areas in several complex variables. The book provides a friendly invitation to this field as the only prerequisite is a basic knowledge of analysis.</p> |

Sommario/riassunto

This book is the result of the first interdisciplinary conference in Vietnam which took place on "the Rule of Law." Instead of beginning immediately with a highly specialized debate from the perspective of one single academic discipline, we started to discuss numerous facets of the subject arising from a multidisciplinary dialogue. For this reason, the contributions for this publication come from various scientific disciplines in Vietnam and Germany: political, historical, social, economic and legal sciences, but also members of Vietnamese governmental and non-governmental organizations. The aim of the volume is to open up a dialogue about the Rule of Law between two very different legal cultures, the German-European and the Vietnamese-Southeast Asian.
