Sommario/riassunto	This text is the first of a two-volume work on molecule surface interactions addressing topics in chemical physics, surface science, physical chemistry, materials science, and electronics and semiconductor manufacture. As with the other titles in the Advances in Chemical Physics series, the chapters are written by an international

group of contributors and cover a wide range of important issues in the field.

Sommario/riassunto	"John of Rupescissa's <i>Vade mecum in tribulacione</i> was meant as an eschatological manual for the thirteen catastrophic years between its composition in December 1356 and the thousand-year reign of Christ expected to begin in 1370. This manual was intended to give righteous Christians practical and spiritual advice on how to survive this period of tribulation. Matthias Kaup's study provides the first annotated critical edition equipped with an English translation. It inducts in the manual's contents, places them in the context of Rupescissa's work and medieval prophetic literature, investigates important aspects of its reception and

clarifies the relationships between its different versions."--
