Sommario/riassunto	The modern emergence of mediation represents the new and evolving application of an ancient and universal approach to settling quarrels. Mediation is now an established method of dispute resolution across a wide range of professional, workplace and social situations including the family, community, commercial, organisational, employment, environmental and international arenas. It is increasingly being applied to new legal, care and health sectors such as child abduction, child protection, housing and medical negligence. This book draws uniquely on the concrete knowledge and practice experience

Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	1. Introduction -- 2. The bill of lading in international trade -- 3. The law of delivery -- 4. Exemption clauses and delivery of goods -- 5. Rotterdam rules and delivery of goods -- 6. Electronic documents -- 7. Rotterdam rules and electronic transport documents -- 8. Concluding remarks.
Sommario/riassunto	Probably the core characteristic of a bill of lading is that the original bill of lading must be presented at the port of destination for a consignee to be entitled to delivery of the goods and for the carrier to get a good discharge of its delivery obligation by delivering the goods to said consignee. This notion is accepted virtually worldwide, but the more precise content of the "presentation rule" differs from jurisdiction to jurisdiction. Furthermore, and of importance, the legal basis establishing the "presentation rule" differs. With the technological advances in maritime transport as well as in communications technology and the emergence of more complicated trading patterns, a system where a specific tangible piece of paper issued at the port of loading has to be presented at the port of discharge to obtain delivery of the goods seems almost archaic and can obviously create problems. Thus, in practice very often - especially in some trades such as the oil trade - the bill of lading is not available at the port of discharge when

the ship is ready to deliver the cargo. The book will first analyse the "presentation rule", its finer contents and its legal basis. It will then go on with (legal) analyses of three developments and responses to the problems that the bill of lading system gives rise to in practice, viz. the commercial, the international legislature's, and the technological response. The commercial response analysed here consists of contractual exemption or limitation clauses in the bill of lading set up as a defence against claims for misdelivery. The international legislature's response denotes the adoption of the Rotterdam Rules which as the first international convention on carriage of goods by sea includes elaborate rules on delivery of the goods. Finally, the technological response denotes the possibility of using electronic (equivalents of) bills of lading. The analyses will include a comparative approach examining both English and Scandinavian law to elucidate the issues with greater clarity.

Sommario/riassunto

The two-volume set IFIP AICT 566 and 567 constitutes the refereed proceedings of the International IFIP WG 5.7 Conference on Advances in Production Management Systems, APMS 2019, held in Austin, TX, USA. The 161 revised full papers presented were carefully reviewed and selected from 184 submissions. They discuss globally pressing issues in smart manufacturing, operations management, supply chain management, and Industry 4.0. The papers are organized in the following topical sections: lean production; production management in food supply chains; sustainability and reconfigurability of manufacturing systems; product and asset life cycle management in smart factories of industry 4.0; variety and complexity management in the era of industry 4.0; participatory methods for supporting the career choices in industrial engineering and management education; blockchain in supply chain management; designing and delivering smart services in the digital age; operations management in engineer-to-order manufacturing; the operator 4.0 and the Internet of Things, services and people; intelligent diagnostics and maintenance solutions for smart manufacturing; smart supply networks; production management theory and methodology; data-driven production management; industry 4.0 implementations; smart factory and IIOT; cyber-physical systems; knowledge management in design and manufacturing; collaborative product development; ICT for collaborative manufacturing; collaborative technology; applications of machine learning in production management; and collaborative technology. .
