

1. Record Nr.	UNINA9910154928203321
Autore	Marieb Elaine N.
Titolo	Human anatomy & physiology // Elaine N. Marieb, Katja Hoehn
Pubbl/distr/stampa	Harlow : , : Pearson, , [2016] ©2016
Edizione	[Tenth, global edition.]
Descrizione fisica	1 online resource (1,274 pages) : illustrations (some color), photographs, tables
Collana	Always Learning
Disciplina	612
Soggetti	Human physiology
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Includes index.
Nota di contenuto	Cover -- Brief Contents -- Title Page -- Copyright Page -- About the Authors -- Preface -- Acknowledgments -- Contents -- 1. The Human Body: An Orientation -- 1.1. Form (Anatomy) Determines Function (Physiology) -- 1.2. The Body's Organization Ranges from Atoms to the Entire Organism -- 1.3. What are the Requirements for Life? -- 1.4. Homeostasis is Maintained by Negative Feedback -- 1.5. Anatomical Terms Describe Body Directions, Regions, and Planes -- A Closer Look Medical Imaging: Illuminating the Body -- 1.6. Many Internal Organs Lie in Membrane-Lined Body Cavities -- 2. Chemistry Comes Alive -- Part 1: Basic Chemistry -- 2.1. Matter is the Stuff of the Universe and Energy Moves Matter -- 2.2. The Properties of an Element Depend on the Structure of its Atoms -- 2.3. Atoms Bound Together Form Molecules -- Different Molecules can make Mixtures -- 2.4. The Three Types of Chemical Bonds are Ionic, Covalent, and Hydrogen -- 2.5. Chemical Reactions Occur when Electrons are Shared, Gained, or Lost -- Part 2: Biochemistry -- 2.6. Inorganic Compounds Include Water, Salts, and Many Acids and Bases -- 2.7. Organic Compounds are made by Dehydration Synthesis and Broken Down by Hydrolysis -- 2.8. Carbohydrates Provide an Easily used Energy Source for the Body -- 2.9. Lipids Insulate Body Organs, Build Cell Membranes, and Provide Stored Energy -- 2.10. Proteins are the Body's Basic Structural Material and have Many Vital Functions -- 2.11. DNA and RNA Store, Transmit, and Help Express Genetic Information -- 2.12. ATP Transfers Energy to

Other Compounds -- 3. Cells: The Living Units -- 3.1. Cells are the Smallest Unit of Life -- Part 1: Plasma Membrane -- 3.2. The Fluid Mosaic Model Depicts the Plasma Membrane as a Double Layer of Phospholipids with Embedded Proteins.

3.3. Passive Membrane Transport is Diffusion of Molecules Down their Concentration Gradient -- 3.4. Active Membrane Transport Directly or Indirectly Uses ATP -- Focus Figure 3.1: Primary Active Transport: The Na⁺-K⁺ Pump -- 3.5. Selective Diffusion Establishes the Membrane Potential -- 3.6. Cell Adhesion Molecules and Membrane Receptors Allow the Cell to Interact with its Environment -- Focus Figure 3.2: G Proteins -- Part 2: The Cytoplasm -- 3.7. Cytoplasmic Organelles Each Perform a Specialized Task -- 3.8. Cilia and Microvilli are Two Main Types of Cellular Extensions -- Part 3: Nucleus -- 3.9. The Nucleus includes the Nuclear Envelope, the Nucleolus, and Chromatin -- 3.10. The Cell Cycle Consists of Interphase and a Mitotic Phase -- 3.11. Messenger RNA Carries Instructions from DNA for Building Proteins -- Focus Figure 3.3: Mitosis -- Focus Figure 3.4: Translation -- 3.12. Apoptosis Disposes of Unneeded Cells -- Autophagy and Proteasomes Dispose of Unneeded Organelles and Proteins -- Developmental Aspects of Cells -- 4. Tissue: The Living Fabric -- 4.1. Tissue Samples are Fixed, Sliced, and Stained for Microscopy -- 4.2. Epithelial Tissue Covers Body Surfaces, Lines Cavities, and Forms Glands -- 4.3. Connective Tissue is the Most Abundant and Widely Distributed Tissue in the Body -- 4.4. Muscle Tissue is Responsible for Body Movement -- 4.5. Nervous Tissue is a Specialized Tissue of the Nervous System -- A Closer Look Cancer-The Intimate Enemy -- 4.6. The Cutaneous Membrane is Dry -- Mucous and Serous Membranes are Wet -- 4.7. Tissue Repair Involves Inflammation, Organization, and Regeneration -- Developmental Aspects of Tissues -- 5. The Integumentary System -- 5.1. The Skin Consists of Two Layers: The Epidermis and Dermis -- 5.2. The Epidermis is a Keratinized Stratified Squamous Epithelium. 5.3. The Dermis Consists of Papillary and Reticular Layers -- 5.4. Melanin, Carotene, and Hemoglobin Determine Skin Color -- 5.5. Hair Consists of Dead, Keratinized Cells -- 5.6. Nails are Scale-Like Modifications of the Epidermis -- 5.7. Sweat Glands Help Control Body Temperature, and Sebaceous Glands Secrete Sebum -- 5.8. First and Foremost, the Skin is a Barrier -- 5.9. Skin Cancer and Burns are Major Challenges to the Body -- Developmental Aspects of the Integumentary System -- System Connections -- 6. Bones and Skeletal Tissues -- 6.1. Hyaline, Elastic, and Fibrocartilage Help Form the Skeleton -- 6.2. Bones Perform Several Important Functions -- 6.3. Bones are Classified by their Location and Shape -- 6.4. The Gross Structure of All Bones Consists of Compact Bone Sandwiching Spongy Bone -- 6.5. Bones Develop Either by Intramembranous or Endochondral Ossification -- 6.6. Bone Remodeling Involves Bone Deposit and Removal -- 6.7. Bone Repair Involves Hematoma and Callus Formation, and Remodeling -- 6.8. Bone Disorders Result From Abnormal Bone Deposition and Resorption -- Developmental Aspects of Bones -- System Connections -- 7. The Skeleton -- Part 1: The Axial Skeleton -- 7.1. The Skull Consists of 8 Cranial Bones and 14 Facial Bones -- 7.2. The Vertebral Column is a Flexible, Curved Support Structure -- 7.3. The Thoracic Cage is the Bony Structure of the Chest -- Part 2: The Appendicular Skeleton -- 7.4. Each Pectoral Girdle Consists of a Clavicle and a Scapula -- 7.5. The Upper Limb Consists of the Arm, Forearm, and Hand -- 7.6. The Hip Bones Attach to the Sacrum, Forming the Pelvic Girdle -- 7.7. The Lower Limb Consists of the Thigh, Leg, and Foot -- Developmental Aspects of the Skeleton -- 8. Joints -- 8.1. Joints are Classified into Three Structural and Three Functional Categories.

8.2. In Fibrous Joints, the Bones are Connected by Fibrous Tissue --
8.3. In Cartilaginous Joints, the Bones are Connected by Cartilage --
8.4. Synovial Joints have a Fluid-Filled Joint Cavity -- 8.5. Five
Examples Illustrate the Diversity of Synovial Joints -- Focus Figure 8.1:
Synovial Joints -- 8.6. Joints are Easily Damaged by Injury,
Inflammation, and Degeneration -- A Closer Look Joints: From Knights
in Shining Armor to Bionic Humans -- Developmental Aspects of Joints
-- 9. Muscles and Muscle Tissue -- 9.1. There are Three Types of
Muscle Tissue -- 9.2. A Skeletal Muscle is Made Up of Muscle Fibers,
Nerves, Blood Vessels, and Connective Tissues -- 9.3. Skeletal Muscle
Fibers Contain Calcium-Regulated Molecular Motors -- 9.4. Motor
Neurons Stimulate Skeletal Muscle Fibers to Contract -- Focus Figure
9.1: Events at the Neuromuscular Junction -- Focus Figure 9.2:
Excitation-Contraction Coupling -- Focus Figure 9.3: Cross Bridge
Cycle -- 9.5. Wave Summation and Motor Unit Recruitment Allow
Smooth, Graded Skeletal Muscle Contractions -- 9.6. ATP for Muscle
Contraction is Produced Aerobically or Anaerobically -- 9.7. The Force,
Velocity, and Duration of Skeletal Muscle Contractions are Determined
by a Variety of Factors -- 9.8. How Does Skeletal Muscle Respond to
Exercise? -- 9.9. Smooth Muscle is Nonstriated Involuntary Muscle --
Developmental Aspects of Muscles -- A Closer Look Athletes Looking
Good and Doing Better with Anabolic Steroids? -- System Connections
-- 10. The Muscular System -- 10.1. For Any Movement, Muscles Can
Act in One of Three Ways -- 10.2. How are Skeletal Muscles Named? --
Focus Figure 10.1: Muscle Action -- 10.3. Fascicle Arrangements Help
Determine Muscle Shape and Force -- 10.4. Muscles Acting With Bones
Form Lever Systems -- 10.5. A Muscle's Origin and Insertion Determine
its Action.
Table 10.1: Muscles of the Head, Part I: Facial Expression -- Table
10.2: Muscles of the Head, Part II: Mastication and Tongue Movement
-- Table 10.3: Muscles of the Anterior Neck and Throat: Swallowing --
Table 10.4: Muscles of the Neck and Vertebral Column: Head
Movements and Trunk Extension -- Table 10.5: Deep Muscles of the
Thorax: Breathing -- Table 10.6: Muscles of the Abdominal Wall: Trunk
Movements and Compression of Abdominal Viscera -- Table 10.7:
Muscles of the Pelvic Floor and Perineum: Support of Abdominopelvic
Organs -- Table 10.8: Superficial Muscles of the Anterior and Posterior
Thorax: Movements of the Scapula and Arm -- Table 10.9: Muscles
Crossing the Shoulder Joint: Movements of the Arm (Humerus) -- Table
10.10: Muscles Crossing the Elbow Joint: Flexion and Extension of the
Forearm -- Table 10.11: Muscles of the Forearm: Movements of the
Wrist, Hand, and Fingers -- Table 10.12: Summary: Actions of Muscles
Acting on the Arm, Forearm, and Hand -- Table 10.13: Intrinsic
Muscles of the Hand: Fine Movements of the Fingers -- Table 10.14:
Muscles Crossing the Hip and Knee Joints: Movements of the Thigh and
Leg -- Table 10.15: Muscles of the Leg: Movements of the Ankle and
Toes -- Table 10.16: Intrinsic Muscles of the Foot: Toe Movement and
Arch Support -- Table 10.17: Summary: Actions of Muscles Acting on
the Thigh, Leg, and Foot -- 11. Fundamentals of the Nervous System
and Nervous Tissue -- 11.1. The Nervous System Receives, Integrates,
and Responds to Information -- 11.2. Neuroglia Support and Maintain
Neurons -- 11.3. Neurons are the Structural Units of the Nervous
System -- 11.4. The Resting Membrane Potential Depends on
Differences in Ion Concentration and Permeability -- Focus Figure 1
1.1: Resting Membrane Potential -- 11.5. Graded Potentials are Brief,
Short-Distance Signals within a Neuron.
11.6. Action Potentials are Brief, Long-Distance Signals within a
Neuron.

Setting the Standard for Innovation in A&P Human Anatomy & Physiology has launched the careers of more than three million healthcare professionals. With the newly revised Tenth Edition, Marieb and Hoehn introduce a clear pathway through A&P that helps students and instructors focus on key concepts and make meaningful connections. Each chapter opens with a visual "Chapter Roadmap" that guides students through the material and shows how concepts are related within and across chapters. The new modular organization makes key concepts more readily apparent and understandable to students, and new videos help students see why the content matters in their course as well as their future careers. As students master important concepts and follow a clear path through chapter content, the expanded suite of learning tools in the book and in MasteringA&P ensure they don't get lost along the way. Also Available with MasteringA&P® This title is also available with MasteringA&P - is an online homework, tutorial, and assessment program designed to improve results by helping students quickly master concepts. Students benefit from self-paced tutorials that feature immediate wrong-answer feedback and hints that emulate the office-hour experience to help keep students on track. MasteringA&P's wide range of interactive, engaging, and assignable activities encourage students to actively learn and retain tough course concepts. Students, if interested in purchasing this title with MasteringA&P, ask your instructor for the correct package ISBN and Course ID. Instructors, contact your Pearson representative for more information..
