Sommario/riassunto	Using examples from the last two centuries, this collection of essays discusses the close links between technology and war. In the opening essay, distinguished historian William H. McNeill demonstrates the extent to which military technology has often led to differentiations among people, both within and between societies. The other studies examine various aspects of weapons technology, drawing on the history of the armed forces of Britain, Prussia, and Australia, among others. Some of these illustrate how the adoption of new weaponry frequently depended as much on national pride and party
