English and Modern Greek Motion Verbs / Sionti, Marietta / Claudino,

Leonardo / Aloimonos, Yiannis / Rose, Carolyn P. / Markantonatou,

Stella -- Dativus Ethicus in the Balkan Languages / Tarpomanova,

Ekaterina

Sommario/riassunto

In the three volumes of *Major Trends in Theoretical and Applied Linguistics*, the editors guide the reader through a well-selected compendium of works, presenting a fresh look at contemporary linguistics. Specialists will find chapters that contribute to their fields of interest, and the three-volume collection will provide useful reading for anyone interested in linguistics. The first volume explores theoretical issues dealing with phonetics-phonology and syntax-semantics-morphology. Volume two is organized into three main sections that examine interdisciplinary linguistics: discourse analysis, gender and lexicography; language acquisition, and language disorders. Finally, volume three focuses on applied linguistics - both language teaching/learning and education.

Nota di contenuto	Examination of the newborn : where are we now? -- In the beginning -- Fetal development : influential factors -- Assessment of fetal well-being -- Risks to the fetus during childbirth -- Neonatal examination -- Abnormal findings and congenital abnormalities -- Accountability and effective care.
Sommario/riassunto	Newborn babies are examined at around 6 to 72 hours after their birth to rule out major congenital abnormalities and reassure the parents that their baby is healthy. This practical text is a step-by-step guide for all practitioners who undertake this clinical examination. It is particularly valuable for midwives and nurses undertaking Examination of the Newborn modules as well as a useful reference work for those already performing this role. It provides midwives and other practitioners involved in neonatal examination with a comprehensive guide to the holistic examination of the newborn infant. Examination of the Newborn encourages the reader to view each mother and baby as unique, taking into account their experiences preconceptually,

antenatally and through childbirth. The text covers: * the role of the first examination as a screening tool; * normal fetal development; * parents' concerns and how to respond to them; * the impact of antenatal diagnostic screening; * the events of labour and birth; * the clinical examination of the neonate; * the identification and management of congenital abnormalities; * accountability and legal issues. This new edition is thoroughly revised throughout to meet current Nursing and Midwifery Council (NMC), General Medical Council (GMC) and National Screening Committee standards. It reflects the new standards and key performance indicators (KPIs) from Public Health England (2016b). Case scenarios, model answers, questions and further reading help the reader to apply the content to their own practice.
