Sommario/riassunto	Building upon recent research on the history of green landscapes in the city in Europe and North America, this volume mirrors the burgeoning global attention to urban green space developments from city policy-makers and planners, architects, climatologists, ecologists, geographers and other social scientists. Taking case studies from Paris, London, Berlin, Helsinki, and other leading centres, the volume examines when, why, and how green landscapes evolved in major cities, and the extent to which they have been shaped by shared external forces as well as by distinctive and specific local needs.
