Livello bibliografico	Monografia
Sommario/riassunto	Claude Lorin's 'Antisucide: Essai de psychanalyse existentielle' aims to address the alarming global issue of suicide, which claims over 800,000 lives annually worldwide. The book seeks to enhance suicide prevention through innovative methods and examines the role of existential psychoanalysis in understanding suicide among writers, philosophers, and historical figures. Lorin, a university professor and clinical psychologist, emphasizes the importance of sensible and compassionate communication techniques in treatment. The book discusses the significance of adverse situations in suicide prevention and critiques traditional methods, suggesting alternative approaches like the 'elephant hunter' technique. Intended for mental health professionals and those interested in psychoanalysis, the work encourages discourse on existential and technical aspects of suicide prevention.
