

1. Record Nr.	UNINA9910155602503321
Titolo	Energy geotechnics / / editors, Frank Wuttke, Geomechanics and Geotechnics, Kiel University, Kiel, Germany, Sebastian Bauer, GeoHydroModelling, Kiel University, Kiel, Germany, Marcelo Sanchez, Zachry Department of Civil Engineering, Texas A&M Unive
Pubbl/distr/stampa	London : , : Taylor & Francis Group, , [2016] ©2016
ISBN	1-315-31524-6 1-315-31523-8
Edizione	[1st ed.]
Descrizione fisica	1 online resource (743 pages)
Collana	Balkema book
Disciplina	624.151
Soggetti	Geotechnical engineering Engineering geology Geology, Structural
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Proceedings of the 1st International Conference on Energy Geotechnics, ICEGT 2016, Kiel, Germany, 29-31 August 2016--title page.
Nota di contenuto	part 1. Regular sessions -- part 2. Minisymposia.
Sommario/riassunto	Energy Geotechnics includes 97 technical papers presented at the 1st International Conference on Energy Geotechnics (ICEGT 2016, Kiel, Germany, 29-31 August 2016). The contributions provides significant advances and critical challenges facing the areas of fundamentals, constitutive and numerical modelling, testing techniques and energy geotechnics applications. Energy Geotechnics contains seven regular sessions and six minisymposia, with contributions on discrete and continuum based modelling as well as investigations based on experimental studies at various scales. The papers on discrete and continuum based modelling examine the behaviour of gas hydrate sediments, cyclic and Themo-Hydro-Mechanical (T-H-M) modelling of energy piles, non-linear behaviour of energy geo-storage and geo-structures, deformation of geomaterials, modelling of borehole heat exchangers and energy walls, analysis of hydraulic fracturing and discontinuities in reservoirs, engineering problems involving gas

hydrates sediments, and modelling of environmental impact of energy geotechnical processes. The technical papers on experimental investigations present small and large scale findings on particle effects, particle-particle and fluid-particle interactions, saturation and thermal effects, water retention, creep behaviour, T-H-M monitoring of energy geotechnical structures, new techniques in laboratory analysis, geomechanical behaviour and cyclic loading of geomaterials. Energy Geotechnics will be of interest to academic and non-academic parties working in the areas of energy production, transport and storage as well as in the fields of energy geotechnics and geomechanics, geotechnical engineering, soil and rock mechanics and geological engineering.
