## Sommario/riassunto

Ricardo A. Carpani's 'Crítica a la ciencia' explores the philosophical and  
 epistemological foundations of science, questioning its current  
 alignment with human needs and environmental adaptation. The book  
 critiques the scientific method, suggesting it may serve pragmatic and  
 materialistic market interests rather than universal human needs.  
 Carpani, a clinical physician and researcher, argues for a reevaluation  
 of the scientific paradigm to better address the complexities of reality  
 and improve humanity's adaptability to its environment. The work is  
 intended for those interested in the philosophy of science and its  
 impact on society.

## Sommario/riassunto

This book collects more than thirty contributions in memory of Wolfgang Schwarz, most of which were presented at the seventh International Conference on Elementary and Analytic Number Theory (ELAZ), held July 2014 in Hildesheim, Germany. Ranging from the theory of arithmetical functions to diophantine problems, to analytic aspects of zeta-functions, the various research and survey articles cover the broad interests of the well-known number theorist and cherished colleague Wolfgang Schwarz (1934-2013), who contributed over one hundred articles on number theory, its history and related fields. Readers interested in elementary or analytic number theory and related fields will certainly find many fascinating topical results among the contributions from both respected mathematicians and up-and-coming young researchers. In addition, some biographical articles highlight the life and mathematical works of Wolfgang Schwarz.
