

1. Record Nr.	UNINA9910158580603321
Autore	Thomas Vinod <1949->
Titolo	Climate Change and Natural Disasters
Pubbl/distr/stampa	London and New York, : Routledge, 2017
ISBN	9781351527910 1351527916 9781351527927 1351527924 9781315081045 1315081040 9781412864527 1412864526
Descrizione fisica	1 online resource (xxv, 157 pages) : illustrations, charts; digital, PDF file(s)
Classificazione	BUS099000POL000000POL025000
Disciplina	363.738747
Soggetti	Climate change mitigation - Economic aspects Climatic changes - Economic aspects Natural disasters - Economic aspects Environmental economics Sustainable development
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Overview -- The anatomy of climate-related natural disasters -- The rising threat of climate-related natural disasters -- Climate change mitigation -- Climate adaptation and disaster management -- Transforming mindsets, motivations, and politics -- A new development paradigm.
Sommario/riassunto	The start of the new millennium will be remembered for deadly climate-related disasters - the great floods in Thailand in 2011, Super Storm Sandy in the United States in 2012, and Typhoon Haiyan in the Philippines in 2013, to name a few. In 2014, 17.5 million people were displaced by climate-related disasters, ten times more than the 1.7 million displaced by geophysical hazards. What is causing the increase

in natural disasters and what effect does it have on the economy? Climate Change and Natural Disasters sends three messages: human-made factors exert a growing influence on climate-related disasters; because of the link to anthropogenic factors, there is a pressing need for climate mitigation; and prevention, including climate adaptation, ought not to be viewed as a cost to economic growth but as an investment. Ultimately, attention to climate-related disasters, arguably the most tangible manifestation of global warming, may help mobilize broader climate action. It can also be instrumental in transitioning to a path of low-carbon, green growth, improving disaster resilience, improving natural resource use, and caring for the urban environment. Vinod Thomas proposes that economic growth will become sustainable only if governments, political actors, and local communities combine natural disaster prevention and controlling climate change into national growth strategies. When considering all types of capital, particularly human capital, climate action can drive economic growth, rather than hinder it.
