

1. Record Nr.	UNINA9910158981603321
Titolo	Nonlinear and stochastic climate dynamics // edited by Christian L.E. Franzke, University of Hamburg, Germany, and Terence J. O'Kane, CSIRO Oceans and Atmosphere, Hobart, Australia
Pubbl/distr/stampa	Cambridge : , : Cambridge University Press, , 2017
ISBN	1-316-88288-8 1-316-33925-4 1-316-88354-X 1-316-88365-5 1-316-88376-0 1-316-88387-6 1-316-88420-1
Descrizione fisica	1 online resource (xxxiv, 432 pages) : digital, PDF file(s)
Disciplina	551.601/51922
Soggetti	Statistical weather forecasting Weather forecasting Global warming Climatic changes Atmospheric circulation - Mathematical models
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Title from publisher's bibliographic system (viewed on 31 Jan 2017).
Sommario/riassunto	It is now widely recognized that the climate system is governed by nonlinear, multi-scale processes, whereby memory effects and stochastic forcing by fast processes, such as weather and convective systems, can induce regime behavior. Motivated by present difficulties in understanding the climate system and to aid the improvement of numerical weather and climate models, this book gathers contributions from mathematics, physics and climate science to highlight the latest developments and current research questions in nonlinear and stochastic climate dynamics. Leading researchers discuss some of the most challenging and exciting areas of research in the mathematical

geosciences, such as the theory of tipping points and of extreme events including spatial extremes, climate networks, data assimilation and dynamical systems. This book provides graduate students and researchers with a broad overview of the physical climate system and introduces powerful data analysis and modeling methods for climate scientists and applied mathematicians.
