

1. Record Nr.	UNINA9910159759303321
Titolo	Forensic sciences research
Pubbl/distr/stampa	[Abingdon, Oxfordshire, United Kingdom] : , : Taylor & Francis, , [2016] - [Oxford] : , : Oxford University Press
ISSN	2471-1411
Descrizione fisica	1 online resource
Disciplina	363.25
Soggetti	Forensic sciences Medical jurisprudence Criminals - Identification Crime laboratories Forensic Sciences Jurisprudence Periodicals. Fulltext Internet Resources. Periodical
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Periodico
Note generali	Refereed/Peer-reviewed

2. Record Nr.	UNINA9910974073203321
Autore	Zhang Qiang
Titolo	Dictionary Learning in Visual Computing / / by Qiang Zhang, Baoxin Li
Pubbl/distr/stampa	Cham : , : Springer International Publishing : , : Imprint : Springer, , 2015
ISBN	9783031022531 303102253X
Edizione	[1st ed. 2015.]
Descrizione fisica	1 online resource (XVII, 133 p.)
Collana	Synthesis Lectures on Image, Video, and Multimedia Processing, , 1559-8144
Disciplina	620
Soggetti	Engineering Electrical engineering Signal processing Technology and Engineering Electrical and Electronic Engineering Signal, Speech and Image Processing
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Acknowledgments -- Figure Credits -- Introduction -- Fundamental Computing Tasks in Sparse Representation -- Dictionary Learning Algorithms -- Applications of Dictionary Learning in Visual Computing -- An Instructive Case Study with Face Recognition -- Bibliography -- Authors' Biographies .
Sommario/riassunto	The last few years have witnessed fast development on dictionary learning approaches for a set of visual computing tasks, largely due to their utilization in developing new techniques based on sparse representation. Compared with conventional techniques employing manually defined dictionaries, such as Fourier Transform and Wavelet Transform, dictionary learning aims at obtaining a dictionary adaptively from the data so as to support optimal sparse representation of the data. In contrast to conventional clustering algorithms like K-means, where a data point is associated with only one cluster center, in a dictionary-based representation, a data point can be associated with a small set of dictionary atoms. Thus, dictionary learning provides a more

flexible representation of data and may have the potential to capture more relevant features from the original feature space of the data. One of the early algorithms for dictionary learning is K-SVD. In recent years, many variations/extensions of K-SVD and other new algorithms have been proposed, with some aiming at adding discriminative capability to the dictionary, and some attempting to model the relationship of multiple dictionaries. One prominent application of dictionary learning is in the general field of visual computing, where long-standing challenges have seen promising new solutions based on sparse representation with learned dictionaries. With a timely review of recent advances of dictionary learning in visual computing, covering the most recent literature with an emphasis on papers after 2008, this book provides a systematic presentation of the general methodologies, specific algorithms, and examples of applications for those who wish to have a quick start on this subject.
