| Sommario/riassunto | Old earth has been deemed unsuitable for life, New Earth is home. With the Uni-Wars over, races have joined together in order to sustain their way of life. All life was considered worth saving, but only one race failed to submit. Humans. Now extinct, humans are a thing of the past. The people of New Earth won't acknowledge their hand in their |

eradication, but they have benefited from it. Dr. Vaggo Blackmore has found the answer, he's restored his races way of life- sustenance through farming. The one thing that will give them back their long lives..... Blood, human blood. Biologically engineered in a lab, Genesis Blackmore has always been different. Her father has told her it's due to her enhancements, the Federated Council sees her as a genetic mutation; and her fellow peers see her as the shiny new toy. Gen has had better days. Everyone on New Earth has milky white skin, platinum blonde hair, and electric blue eyes. It's the norm. Genesis' glossy, black hair, ice blue eyes ringed by gold, would have almost made her socially acceptable- if it wasn't for her golden skin and blue, gold veins. In a sea of milky white she alone is the dark anomaly. All Pars get their life's nourishment through blood plasma. All Pars find their match through the tasting. Gen can do neither, forbidden by her father to do so. She can neither taste, nor be tasted. Something that's never bothered her until now.
