

1. Record Nr.	UNINA9910161633103321
Autore	Smith G. V (George V.), <1916->
Titolo	Evaluations of the elevated temperature tensile and creep-rupture properties of C-Mo, Mn-Mo and Mn-Mo-Ni steels / / G. V. Smith
Pubbl/distr/stampa	Philadelphia : , : ASTM International, , 1971
ISBN	9780083101135
Descrizione fisica	1 online resource (94 pages)
Collana	ASTM data series publication ; ; DS 47
Disciplina	620.1108
Soggetti	Steel alloys - Testing Metals - Effect of high temperatures on Steel - Creep
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	This report evaluates the elevated temperature strength properties of carbon-moly steel, and various modified versions of that steel commonly identified as manganese-molybdenum or manganese-molybdenum-nickel steels. The data that have been evaluated encompass test results previously included in ASTM Data Series DS 6 (1953) and DS6-S1 (1966), and previously unpublished test results gathered by The Metal Properties Council.
