Sommario/riassunto	<p>The DVM2022 presents a forum for academics, scientists, and engineers to exchange ideas and research results in the area of machine dynamics, noise and vibration, fluid power systems design, energy transmission, and motion control in various industrial applications. It provides constructive feedback from the scientific and industrial community. It will be the sixth conference that conducts biennially since 2012. Its proceedings in 2014 and 2016 years were published in Procedia Engineering, the fourth conference DVM2018 was merged with the 2018 IEEE Global Fluid Power Society PhD Symposium (GFPS2018). The proceedings of the fifth conference DVM2020 were published in the IEEE digital library.</p>

Sommario/riassunto	My field artillery unit was mobilized to perform a non-standard military police mission during Operation Iraqi Freedom II. The unit was part of the largest National Guard mobilization from our state since the Vietnam era. The challenges of deploying a field artillery unit as an ad hoc MP company were many. The challenges were overcome through the strength of our NCO Corps. As I write this paper, I am preparing for a deployment, a non-standard mission with my current unit. As I compare the two mobilizations, it is apparent that the process for mobilizing, training and preparing our soldiers has improved since the first rotation, but issues concerning the selection of units for non-standard mission still exist five years later.
