Sommario/riassunto	This book by Commander John Trost Kuehn examines coalition warfare tactics during the Napoleonic Wars and their influence on achieving unity of effort among allied forces. By analyzing historical case studies from 1799 and 1813, it explores how tactical and doctrinal differences affected the cohesion and success of multinational coalitions. The work emphasizes the importance of unity of effort over unity of command, as recognized in modern U.S. military doctrine. The book is intended for military historians, strategists, and those interested in understanding coalition dynamics and leadership challenges in warfare.

**Sommario/riassunto**

First published in 1932, the original blurb states: "...This is designed as an introduction to the scientific study of man and society for those who have not time or inclination to pursue the more recondite problems of mind. .... It concentrates on the dynamics of the human organism and aims to give the student that minimum acquaintance with psychology without which he is not fitted to be a citizen of the modern world." Today it can be read and enjoyed in its historical context.
