Nota di contenuto	Introduction -- Setting the Stage: Key Concepts and Issues -- A Historical Review of Multilaterally Agreed Criteria for Action on Commodity Prices (1947–1989) -- From Market Intervention to Free Trade and Back to Managed Trade? (1989–2011) -- Beyond the Impasse: Towards a New Normative Approach -- Conclusion.
Sommario/riassunto	In Agriculture, Price Stabilisation and Trade Rules , Irene Musselli offers a comprehensive doctrinal and historical analysis of stabilisation tools and approaches in agriculture. Using her extensive practical experience in the field, she takes up the interface of the tools discussed with trade rules and offers the first comprehensive analysis of WTO rules from the perspective of stabilisation policies. This volume offers a fresh look at the tool box of managed trade in agricultural commodities and develops new and refined solutions that take into account the legal role of equity and of graduation. Musselli offers new insights and is able to invigorate a debate caught in overly ideological entanglements between market oriented and interventionist schools.

Nota di contenuto	Introduction -- Literature Review -- Single-Stage Service Level and Tardiness Model -- Simultaneous Capacity and Planned Lead Time Optimization -- Optimal Composition of Number and Size of Machines -- Service Level Constraint Models -- Conclusion.
Sommario/riassunto	The book presents different models for the simultaneous optimization problem of capacity investment and work release rule parameterization. The overall costs are minimized either including backorder costs or considering a service level constraint. The available literature is extended with the integration of a distributed customer required lead time in addition to the actual demand distribution. Furthermore, an endogenous production lead time is introduced. Different models for make-to-order production systems with one or multiple serial processing stages are developed. Capacity investment is linked to the processing rates of the machines or to the number of the machines. Results are equations for service level, tardiness, and FGI lead time in such a production system. For special cases with M/M/1 and M/M/s queues explicit solutions of the optimization problems or optimality conditions concerning capacity investment and work release rule parameterization are provided.

Sommario/riassunto	This ebook consists of a summary of the ideas, viewpoints and facts presented by Jack Cashill in his book "What's the Matter with California? Cultural Rumbles from the Golden State and Why the Rest of Us Should be Shaking". This summary offers a concise overview of the entire book in less than 30 minutes reading time. However this work does not replace in any case Jack Cashill's book. Cashill argues that the focus should be on California because a cultural cataclysm appears to be on the way but it is still time to save American treasure from that future. He also points that history has shown
