

1. Record Nr.	UNINA9910166651203321
Titolo	Cyber-Physical Systems of Systems [[electronic resource]] : Foundations – A Conceptual Model and Some Derivations: The AMADEOS Legacy // edited by Andrea Bondavalli, Sara Bouchenak, Hermann Kopetz
Pubbl/distr/stampa	Cham : , : Springer International Publishing : , : Imprint : Springer, , 2016
ISBN	3-319-47590-8
Edizione	[1st ed. 2016.]
Descrizione fisica	1 online resource (XV, 257 p. 124 illus.)
Collana	Programming and Software Engineering ; ; 10099
Disciplina	004.6
Soggetti	Computer organization Software engineering System theory Application software Computer Systems Organization and Communication Networks Software Engineering Complex Systems Information Systems Applications (incl. Internet) Computer Applications
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Basic concepts on systems of systems -- interfaces in evolving cyber-physical systems-of-systems -- emergence in cyber-physical systems-of-systems (CPSOSS) -- AMADEOS sysml profile for SoS conceptual modeling -- AMADEOS framework and supporting tools -- time and resilient master clocks in cyber-physical systems -- managing dynamicity in SoS -- case study definition and implementation.
Sommario/riassunto	This book is open access under a CC BY 4.0 license. Technical Systems-of-Systems (SoS) – in the form of networked, independent constituent computing systems temporarily collaborating to achieve a well-defined objective – form the backbone of most of today’s infrastructure. The energy grid, most transportation systems, the global banking industry, the water-supply system, the military equipment, many embedded

systems, and a great number more, strongly depend on systems-of-systems. The correct operation and continuous availability of these underlying systems-of-systems are fundamental for the functioning of our modern society. The 8 papers presented in this book document the main insights on Cyber-Physical System of Systems (CPSoSs) that were gained during the work in the FP7-610535 European Research Project AMADEOS (acronym for Architecture for Multi-criticality Agile Dependable Evolutionary Open System-of-Systems). It is the objective of this book to present, in a single consistent body, the foundational concepts and their relationships. These form a conceptual basis for the description and understanding of SoSs and go deeper in what we consider the characterizing and distinguishing elements of SoSs: time, emergence, evolution and dynamicity.
