Sommario/riassunto	To date, the majority of HIV/AIDS research has concentrated on education and prevention for those with a seronegative status, while studies of HIV positive individuals have been concerned with their potential to infect others. The Endangered Self however, focuses on how the discovery of an HIV positive status affects the individual's sense of identity, on the experience of living with HIV and its effects on the individual's social relationships. In this comparative study of the UK

and US, Green and Sobo explore identity change and the stigma
attached to an HIV positive status within t
