Sommario/riassunto	"The early years of the twenty-first century have seen an upsurge of anti-capitalist campaigning, challenging the very basis of the New World Economic Order. Dramatic protests in Seattle or Genoa captured media headlines. But the headlines leave key questions unanswered,

about the ultimate significance of the challenges posed by global social movements and the development of civil society, both South and North. Global Citizens sets out to explore the lessons from these experiences of social mobilization."--Jacket.

Contracts and Balance Group Contracts -- 10. Transmission Contracts
-- Part IV Financial Contracts: 11. Financial Contracts -- 12. Financial
Derivatives on Transmission Capacity.

Sommario/riassunto

This book aims to describe the mechanisms of the internal wholesale electricity market in terms of the legal tools and practices used by electricity producers, the most important market participants. In this regard, the focus is on Northwestern Europe. Because of the book's functional perspective, it is not limited to the external regulation of electricity markets at the EU level and also describes the business models and practices employed by electricity producers. Both the physical and financial marketplaces are examined and topics including electricity supply, balancing, transmission and derivatives are covered. The target for the completion of the EU's internal electricity market was 2014. The internal wholesale electricity market is very important not only for electricity producers, suppliers and major end consumers but also for network operators, marketplace operators, electricity technology firms, investment firms and market regulators.
