Note generali	Description based upon print version of record.
Nota di contenuto	Preliminaries; INTRODUCTION; A FRAMEWORK FOR ASSESSING THE FEASIBILITY OF ESTABLISHING NATIONAL OUTCOMES DATA BASES; SHARED DECISION-MAKING: A REVIEW OF THE LITERATURE; PROSTATE CANCER DATA BASE FEASIBILITY ASSESSMENT; OSTEOARTHRITIS DATA BASE FEASIBILITY ASSESSMENT; CONCLUSIONS AND RECOMMENDATIONS; Draft Questions-Prostate Cancer Consultative Meeting; ; REFERENCES
Sommario/riassunto	This report examines issues surrounding the establishment of a national patient outcomes database that would be used by patients and providers to make more informed treatment decisions. It focuses on prostate cancer and surgery for osteoarthritis. The authors conclude

that such longitudinal databases would be both desirable and feasible but would require substantial resources.
