Sommario/riassunto	China's two decades of rapid economic growth have fueled a demand for energy that has outstripped domestic sources of supply. China became a net oil importer in 1993, and the country's dependence on energy imports is expected to continue to grow over the next 20 years, when it is likely to import some 60 percent of its oil and at least 30 percent of its natural gas. China thus is having to abandon its traditional goal of energyself-sufficiency--brought about by a fear of strategic vulnerability--and look abroad for resources. This study looks

at the measures that China is taking to achieve ene
