Sommario/riassunto

The present volume is a corpus-based study of the occurrence, variation, and change in the use of English adjective pairs in -ic and -ical over several centuries. The study involves the analysis of large, multi-million-word corpora representing the English language at various stages. It examines the nature of competition between the two affixes: what kind of rivalry existed, what kinds of words entered into competition, and in what ways the rivalry was resolved. The book presents close studies of six notably differentiated -ic/-ical adjective pairs, namely classic/classical, comic/comical, economic/economical, electric/electrical, historic/historical, and magic/magical, as well as commentaries on some 40 other -ic/-ical pairs, which manifest different types of shifts in use through history. It also includes critical discussion of general perceptions on and approaches to the practical use of corpora, stressing the importance of close and careful study of the materials under analysis. It further emphasises the value of consulting a variety of sources alongside corpora, including dictionaries and language usage manuals. This volume is of interest to language scholars in many fields, including corpus linguistics, diachronic linguistics, semantic change, lexicology, and word formation.

## Sommario/riassunto

This report reviews international research into the barriers to play for children with disabilities. The authors come from different disciplinary backgrounds, in Sociology, Social Policy, Anthropology, Occupational Health and Education and bring different concerns to this review. They are united, however, in their adoption of a rights-based perspective. The UNCRC and UNCRPD emphasise the right to play for children with disabilities. Play is vital for child development. The problem of 'play deprivation' for many children with disabilities is very real. Yet the right to, and value of 'play for the sake of play', for fun and recreation, must not be forgotten in relation to the lives of children with disabilities. The focus in this report is upon barriers to play that exist beyond the minds and bodies of individual children, within a 'disabling' environment. Barriers include those associated with the design of the built environment, social attitudes and professional practices. The report maps an agenda for further research in this area, emphasising the need for participatory methodologies that capture the views and voices of children with disabilities, their friends and families, on this important issue of play.
