

1. Record Nr.	UNINA9910142852003321
Titolo	2006 IEEE International Symposium on Industrial Electronics : Montréal, Québec, Canada : 9-13 July 2006
Pubbl/distr/stampa	[Place of publication not identified], : IEEE, 2006
ISBN	9781509090921 1509090924 9781424404971 1424404975
Disciplina	670.42
Soggetti	Industrial electronics - Automation Manufacturing processes Power electronics Electronic control Electrical & Computer Engineering Engineering & Applied Sciences Electrical Engineering
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph

2. Record Nr.	UNINA9910220041403321
Autore	Agepati S. Raghavendra
Titolo	Signal Transduction in Stomatal Guard Cells
Pubbl/distr/stampa	Frontiers Media SA, 2017
Descrizione fisica	1 online resource (105 p.)
Collana	Frontiers Research Topics
Soggetti	Botany & plant sciences
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	<p>Stomata, the tiny pores on leaf surface, are the gateways for CO₂ uptake during photosynthesis as well as water loss in transpiration. Further, plants use stomatal closure as a defensive response, often triggered by elicitors, to prevent the entry of pathogens. The guard cells are popular model systems to study the signalling mechanism in plant cells. The messengers that mediate closure upon perception of elicitors or microbe associated molecular patterns (MAMPs) are quite similar to those during ABA effects. These components include reactive oxygen species (ROS), nitric oxide (NO), cytosolic pH and intracellular Ca²⁺. The main components are ROS, NO and cytosolic free Ca²⁺. The list extends to others, such as G-proteins, protein phosphatases, protein kinases, phospholipids and ion channels. The sequence of these signalling components and their interaction during stomatal signalling are complex and quite interesting. The present e-Book provides a set of authoritative articles from 'Special Research Topic' on selected areas of stomatal guard cells. In the first set of two articles, an overview of ABA and MAMPs as signals is presented. The next set of 4 articles, emphasize the role of ROS, NO, Ca²⁺ as well as pH, as secondary messengers. The next group of 3 articles highlight the recent advances on post-translational modification of guard cell proteins, with emphasis on 14-3-3 proteins and MAPK cascades. The last article described the method to isolate epidermis of grass species and monitor stomatal responses to different signals. Our e-Book is a</p>

valuable and excellent source of information for all those interested in guard cell function as well as signal transduction in plant cells.
