Sommario/riassunto	Part of a series examining the technology competition between security

organizations and terrorist organizations, this report focuses on understanding how terrorist groups make technology choices and consequently how the United States can discourage their adoption of advanced conventional weapons. Five types of advanced conventional weapons are identified that could provide terrorists with a new and qualitatively different weapon capability: sniper rifles, squad-level weapons, antitank missiles, large limpet mines, and mortar systems. Two key methods of limiting the threat from these systems
