Lingua di pubblicazione	Inglese

Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph
Sommario/riassunto	Survivors of improvised explosive device attacks often have traumatic brain injuries (TBIs). Those recovering from TBIs often find they must coordinate services across multiple systems of care, something that would be difficult even without cognitive challenges. This report documents RAND's assessment of a program designed to facilitate care coordination for such individuals.
