Sommario/riassunto	Concerns about how terrorists might attack in the future are central to the design of security efforts to protect both individual targets and the nation overall. In thinking about emerging threats, security planners are confronted by a panoply of possible future scenarios coming from sources ranging from the terrorists themselves to red-team brainstorming efforts to explore ways adversaries might attack in the future. This paper explores an approach to assessing emerging and/or novel threats and deciding whether --or how much--they should

concern security planners.
