Sommario/riassunto	Recent experiences in Iraq, Afghanistan, and the Balkans have highlighted the importance of environmental considerations. These range from protecting soldier health and disposing of hazardous waste to building water supply systems and other activities that help achieve national goals in the post-conflict phase of contingency operations. The Army has become increasingly involved with environmental issues

in every contingency operation and must be better prepared to deal with them. This study assesses whether existing policy, doctrine, and guidance adequately address environmental activities.
