

1. Record Nr.	UNINA9910231237403321
Autore	Polyxeni Vassilakopoulou
Titolo	Information Infrastructures within European Health Care [[electronic resource]] : Working with the Installed Base // edited by Margunn Aanestad, Miria Grisot, Ole Hanseth, Polyxeni Vassilakopoulou
Pubbl/distr/stampa	Springer Nature, 2017 Cham : , : Springer International Publishing : , : Imprint : Springer, , 2017
ISBN	3-319-51020-7
Edizione	[1st ed. 2017.]
Descrizione fisica	1 online resource (VI, 263 p. 37 illus., 21 illus. in color.)
Collana	Health Informatics, , 1431-1917
Disciplina	502.85
Soggetti	Health informatics Health administration Public administration Health Informatics Health Administration Public Administration
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Introduction -- Overview of e-prescription and public patient-oriented web platforms -- Services supported aims-antecedents-the role of national and EU policies -- Information infrastructures and notions related to them, definition and role of the installed base -- Structure and process for infrastructural development -- e-prescription: Germany, Greece, Norway, Spain, UK -- Cross-country commentary -- Public patient-oriented web platforms: Denmark, Italy, Norway, Spain, Sweden, UK -- Cross-country commentary -- A framework for making sense and working with the installed base.
Sommario/riassunto	This book is open access under a CC BY-NC 2.5 license. This book consolidates experiences from across Europe on the design, development, implementation and evolution of inter-organisational information infrastructures for healthcare. It provides insights with practical relevance for those involved or interested in the planning and implementation of such infrastructures and includes 11 empirical cases

on the introduction of core infrastructural arrangements in different national settings: six cases investigate the use of e-prescriptions and five the public platforms for patient-oriented eHealth services. Both are linked to different types of aims. E-prescription initiatives are usually seen as opportunities to improve healthcare delivery by systematic change (controlling medication costs, improving patient safety and providing rich information for policy making and performance management). Public platforms for patient-oriented eHealth services are seen as opportunities for change and innovation, aiming to strengthen the patients' role and facilitate a shift from provider-centered healthcare towards patient-centeredness. For both types of initiatives, there is a requirement to mix novelty with pre-existing infrastructural components. The cases are analysed by leading experts in health information systems through a common theoretical framework, exploring the role of the pre-existing sociotechnical basis, i.e. the installed base, and how it fundamentally impacts the evolution of information infrastructures. The book advances an "installed base sensitivity" in decision-making both at the policy/strategy level and at the concrete eHealth design level and shows how practitioners and policy-makers can address the complexity of infrastructures that facilitate information flows across organisational boundaries.
