1. Record Nr.   UNINA9910251397203321

   Titolo   CLARIN in the Low Countries

   Pubbl/distr/stampa   Ubiquity Press, 2017

   ISBN   1-911529-25-0

   Descrizione fisica   1 online resource (414)

   Disciplina   001.3079492

   Soggetti   Humanities
                        Society & social sciences

   Lingua di pubblicazione   Inglese

   Formato   Materiale a stampa

   Livello bibliografico   Monografia

   Nota di bibliografia   Includes bibliographical references.

   Sommario/riassunto   "This book describes the results of activities undertaken to construct
                        the CLARIN research infrastructure in the Low Countries, i.e., in the
                        Netherlands and in Flanders (the Dutch-speaking part of Belgium).
                        CLARIN is a European research infrastructure for humanities and social
                        science researchers that work with natural language data. This book
                        introduces the CLARIN infrastructure, describes various aspects of the
                        technical implementation of the infrastructure, and introduces data,
                        applications and software services created in the Low Countries for a
                        wide variety of humanities disciplines. These enable researchers to
                        accelerate their research activities and to base their conclusions on a
                        much larger and richer empirical base than was possible before, thus
                        providing a basis for carrying out groundbreaking research in which old
                        questions can be investigated in new ways and new questions can be
                        raised and investigated for the first time.
                        Given CLARIN's focus on language data, linguistics and particularly
                        syntax are prominently present. However, other humanities disciplines
                        that work with natural language data such as history, literary studies,
                        religion studies, media studies, political studies, and philosophy are
                        represented as well. The book is a must read for humanities scholars
                        and students who want to understand and use the potential that the
                        Digital Humanities offer, as well as for computer scientists and
                        developers of research infrastructures, in particular for researchers
