Sommario/riassunto

This book presents a vision of education for citizenship, which takes as its starting point an account of what it means to be intercultural. Theory and concepts of interculturality are applied to citizenship education in order to extend its meaning and significance within and beyond the nation state. The book advances a concept of intercultural citizenship which is sensitive to complexities of identity and diversity and, through international case studies, analyses the degree to which intercultural citizenship is present or emergent in contemporary education systems. It provides a statement of 'axioms and characteristics' of education for intercultural citizenship to act both as a framework for planning education for intercultural citizenship and as criteria for evaluating the degree of intercultural citizenship education already present in existing education systems. The book will be of interest to those currently working in intercultural education as well as those who work in education for citizenship.

Sommario/riassunto

Inflationary pressures have heightened in the oil-rich Gulf Cooperation Council (GCC) since 2003. This paper studies determinants of inflation in GCC, using an empirical model that includes domestic and external factors. Inflation in major trading partners appears to be the most relevant foreign factor. In addition, oil revenues have reinforced inflationary pressures through growth of credit and aggregate spending. In the short-run, binding capacity constraints also explain higher inflation given increased government spending. Nonetheless, by targeting supply-side bottlenecks, the increase in government

spending is easing capacity constraints and will ultimately help to moderate price inflation.

Sommario/riassunto	This book is an up-to-date, technically detailed yet easy-to-read

reference book on current clinical applications of MDCT in small animals. It has been designed to serve as the reference book for all MDCT-users, such as veterinary radiologists, imaging technicians, oncologists, surgeons, and non-radiologist clinicians. Individual chapters on novel clinically important topics include applications in endocrinology, oncology, trauma, and cardiovascular CT, as well as sections on organ-specific pathologies and their CT characteristics. The book will also cover main domains of CT, such as thorax and the trauma imaging. Anatomy, clinical aspects, pathology, and CT signs are integrated to provide the reader with the basis for interpretation of MDCT findings. Many excellent 2D multiplanar and 3D figures illustrating typical CT findings of various conditions will serve as a clinical reference for the reader.
