

1. Record Nr.	UNINA9910253961203321
Autore	Connor Jerome J
Titolo	Fundamentals of Structural Engineering // by Jerome J. Connor, Susan Faraji
Pubbl/distr/stampa	Cham : , : Springer International Publishing : , : Imprint : Springer, , 2016
ISBN	3-319-24331-4
Edizione	[2nd ed. 2016.]
Descrizione fisica	1 online resource (xxvii, 1050 pages) : 900 illustrations, 754 in color
Disciplina	624.1
Soggetti	Mechanics Mechanics, Applied Light construction Steel construction Lightweight construction Buildings—Design and construction Building Construction Engineering, Architectural Building construction Structural materials Solid Mechanics Light Construction, Steel Construction, Timber Construction Building Construction and Design Solid Construction Structural Materials
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph
Nota di contenuto	Part I - Statically Determinate Structures -- 1.Introduction to Structural Engineering -- 2.Statically Determinate Truss Structures -- 3.Statically Determinate Beams -- 4.Statically Determinate Plane Frames -- 5. Cable Structures -- 6.Statically Determinate Curved Members -- 7. Shallow Foundations -- 8. Vertical Retaining Wall Structures -- Part II- Statically Indeterminate Structures -- 9.The Force Method -- 10.The

Displacement Method -- 11. Approximate Methods for Estimating Forces in Statically Indeterminate Structures -- 12. Finite Element Displacement Method for Framed Structures -- Part III- Practice of Structural Engineering -- 13. Multi-span Horizontal Structures -- 14. Lateral Load Issues for Buildings -- 15. Vertical Loads on Multistory Buildings -- 15. Vertical Loads on Multistory Buildings -- 16. Inelastic Response of Structures.

Sommario/riassunto

This book presents new methods and tools for the integration and simulation of smart devices. The design approach described in this book explicitly accounts for integration of Smart Systems components and subsystems as a specific constraint. It includes methodologies and EDA tools to enable multi-disciplinary and multi-scale modeling and design, simulation of multi-domain systems, subsystems and components at all levels of abstraction, system integration and exploration for optimization of functional and non-functional metrics. By covering theoretical and practical aspects of smart device design, this book targets people who are working and studying on hardware/software modelling, component integration and simulation under different positions (system integrators, designers, developers, researchers, teachers, students etc.). In particular, it is a good introduction to people who have interest in managing heterogeneous components in an efficient and effective way on different domains and different abstraction levels. People active in smart device development can understand both the current status of practice and future research directions.

- Provides a comprehensive overview of smart systems design, focusing on design challenges and cutting-edge solutions;
- Enables development of a co-simulation and co-design environment that accounts for the peculiarities of the basic subsystems and components to be integrated;
- Describes development of modeling and design techniques, methods and tools that enable multi-domain simulation and optimization at various levels of abstraction and across different technological domains.
