Sommario/riassunto	Nominated for the Best contribution to Slavic Linguistics/AATSEEL book award 2011 The concept of complex emotions is obviously polysemous. On the one hand, we can interpret it as a non-basic, non-prototypical, or culture-specific notion, on the other - and this is the interpretation we propose in this work - a complex emotion concept can be looked upon as a concept whose complexity emerges in interaction, due to the complex nature of its object. Our interpretation is thus construction-based, one in which meaning is not to be found exclusively in the lexical semantics of the term, but also in the, clearly meaning-laden, grammatical construction, e.g. a complement clause, expressing the object or cause of the emotion. The construal of a scene

mapped on the form of a complex sentence involves the emotion that is unambiguously complex and not necessarily universal or prototypical. We argue throughout this book that cross-linguistic grammatical mismatches are a visible sign of conceptual and categorizational distinctions between the conceptualization of emotion in different languages and cultures. They also signal differences in what individual speakers consider salient in a portrayed scene. We offer a contrastive corpus-based study of Polish and English emotion concepts and the linguistic patterns they enter. Our theoretical approach combines lexical semantics and cognitive linguistics and proposes a cognitive corpus linguistics methodology. It is a cognitive linguistic endeavor in which we analyze grammatical category mismatches and provide detailed semantic analyses of different complement choices of emotion predicates. We also discuss insights into Polish and English cultural values gleaned from the different underlying categorizations of emotions. Combining theoretical analyses with pedagogical theory and classroom applications, this work breaks new ground and will reach audiences of linguists, teachers and students of Polish, teachers and students of English, translators, and other language researchers and practitioners.

Sommario/riassunto	This book describes structural analysis methods for examining energy demand and energy efficiency that are important in formulating regional economic and environmental policies. Beginning with ways of ascertaining regional energy demand, it describes methods for developing energy efficiency indicators and their determinants. Fluctuations in regional energy demand are largely explained by analyzing variations in energy intensity, and there is a strong association between energy efficiency indicators and energy intensity.

The energy efficiency indicator proposed is consistent with fluctuations in energy intensity and is highly accurate. According to the empirical analysis using this indicator, energy efficiency is high in regions where population concentration has risen, as typified by "compact cities." As such, the book highlights the need to increase regional energy efficiency, to achieve regional economic growth despite growing environmental constraints, and the importance of forming and developing clusters to this end. The book is a valuable resource for planners, researchers and government employees.
