

1. Record Nr.	UNINA9910254030103321
Titolo	Atypical Elements in Drug Design // edited by Jacob Schwarz
Pubbl/distr/stampa	Cham : , : Springer International Publishing : , : Imprint : Springer, , 2016
ISBN	3-319-27742-1
Edizione	[1st ed. 2016.]
Descrizione fisica	1 online resource (162 p.)
Collana	Topics in Medicinal Chemistry, , 1862-2461 ; ; 17
Disciplina	540
Soggetti	Medicinal chemistry Pharmaceutical technology Inorganic chemistry Medicinal Chemistry Pharmaceutical Sciences/Technology Inorganic Chemistry
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references at the end of each chapters and index.
Nota di contenuto	The Future of Boron in Medicinal Chemistry: Therapeutic and Diagnostic Applications -- Drug Design Based on the Carbon/Silicon Switch Strategy -- Silicon Mimics of Unstable Carbon -- Selenium-Functionalized Molecules (SeFMs) as Potential Drugs and Nutritional Supplements -- Selenium-Based Drug Design.
Sommario/riassunto	Medicinal chemistry is both science and art. The science of medicinal chemistry offers mankind one of its best hopes for improving the quality of life. The art of medicinal chemistry continues to challenge its practitioners with the need for both intuition and experience to discover new drugs. Hence sharing the experience of drug research is uniquely beneficial to the field of medicinal chemistry. Drug research requires interdisciplinary team-work at the interface between chemistry, biology and medicine. Therefore, the topic-related series Topics in Medicinal Chemistry covers all relevant aspects of drug research, e.g. pathobiochemistry of diseases, identification and validation of (emerging) drug targets, structural biology, drugability of targets, drug design approaches, chemogenomics, synthetic chemistry

including combinatorial methods, bioorganic chemistry, natural compounds, high-throughput screening, pharmacological in vitro and in vivo investigations, drug-receptor interactions on the molecular level, structure-activity relationships, drug absorption, distribution, metabolism, elimination, toxicology and pharmacogenomics. In general, special volumes are edited by well known guest editors.
