Sommario/riassunto

This book gives a state-of-the-art view by recognized researchers of the nanotechnologies required for future integrated systems leading to innovations in energy, the environment, and biotechnologies.

Nanostructures that would be difficult to form using the current semiconductor technology will be realized using a combination of bottom-up and top-down processes, including hybrid nanostructures made of inorganic and organic/biological materials. Bio-sensing, imaging, and cell or molecular manipulation are discussed in Chapters 2–7. The acquisition of basic knowledge on the cellular level will lead to curing serious diseases. Also, nanofabrication technologies, discussed in Chapters 8–15, will lead to next-generation solar cells, secondary batteries, and advanced electronic circuits using nanostructured materials, thus providing solutions for serious energy and environment issues. Prospective readers of this book include graduate students as well as researchers and engineers working in this field.

Sommario/riassunto

This volume brings together scholars from various areas (history, philology, linguistics, history of political ideas) and attempts a fresh survey of current trends in the analysis of Thucydides' historical narrative. Individual contributions range from a general outlook of Thucydides' historical and historiographical concepts to detailed analysis of narrative strategies, linguistic features and stylistic devices. Special attention is given to questions such as the representation of character, the role of individuals, the interaction between leaders and masses in Athenian democracy, the construction of speeches in Thucydides' work, etc. The analysis of language, style and narrative properties is related to the construction of meaning according to current standards of textual analysis and interpretation.
