

1. Record Nr.	UNINA9910254055503321
Titolo	The Roles of Accelerated Pavement Testing in Pavement Sustainability : Engineering, Environment, and Economics // edited by José P. Aguiar-Moya, Adriana Vargas-Nordcbeck, Fabricio Leiva-Villacorta, Luis G. Loría-Salazar
Pubbl/distr/stampa	Cham : , : Springer International Publishing : , : Imprint : Springer, , 2016
ISBN	3-319-42797-0
Edizione	[1st ed. 2016.]
Descrizione fisica	1 online resource (XVII, 905 p. 523 illus., 364 illus. in color.)
Disciplina	620.11
Soggetti	Materials science Transportation engineering Traffic engineering Engineering geology Engineering—Geology Foundations Hydraulics Characterization and Evaluation of Materials Transportation Technology and Traffic Engineering Geoengineering, Foundations, Hydraulics
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references at the end of each chapters and index.
Sommario/riassunto	This compendium gathers the latest advances in the area of Accelerated Pavement Testing (APT), a means of testing full-scale pavement construction in an accelerated manner for structural deterioration in a very short term. Compiling novel research results presented at the 5th International Conference on Accelerated Pavement Testing, San Jose, Costa Rica, the volume serves as a timely and highly relevant resource for materials scientists and engineers interested in determining the performance of a pavement structure during its service

life (10+ years) in a few weeks or months. Stands as the only collection focusing on the advancements of full scale testing in pavements, and the benefits associated with the technology; Includes the perspective from research programs worldwide that are using the APT technology; Illustrates efficient means of calibrating / developing pavement design methods; Demonstrates the long term savings resulting from evaluating technologies prior to field construction.
