1.	Record Nr.	UNINA9910254068603321
	Autore	Zhang Ping
	Titolo	A kaleidoscopic view of graph colorings / / by Ping Zhang
	Pubbl/distr/stampa	Cham : , : Springer International Publishing : , : Imprint : Springer, , 2016
	ISBN	3-319-30518-2
	Edizione	[1st ed. 2016.]
	Descrizione fisica	1 online resource (160 p.)
	Collana	SpringerBriefs in Mathematics, , 2191-8198
	Disciplina	511.56
	Soggetti	Graph theory
		Combinatorial analysis
		Applied mathematics
		Engineering mathematics
		Graph Theory
		Combinatorics
		Applications of Mathematics
	Lingua di pubblicazione	Inglese
	Formato	Materiale a stampa
	Livello bibliografico	Monografia
	Note generali	Description based upon print version of record.
	Nota di bibliografia	Includes bibliographical references and index.
	Nota di contenuto	1. Introduction -- 2. Binomial Edge Colorings -- 3. Kaleidoscopic Edge Colorings -- 4. Graceful Vertex Colorings -- 5.Harmonious Vertex Colorings -- 6. A Map Coloring Problem -- 7. Set Colorings -- 8. Multiset Colorings -- 9. Metric Colorings -- 10. Sigma Colorings -- 11. Modular Colorings -- 12. A Banquet Seating Problem -- 13. Irregular Colorings -- 14. Recognizable Colorings -- References -- Index. .
	Sommario/riassunto	This book describes kaleidoscopic topics that have developed in the area of graph colorings. Unifying current material on graph coloring, this book describes current information on vertex and edge colorings in graph theory, including harmonious colorings, majestic colorings, kaleidoscopic colorings and binomial colorings. Recently there have been a number of breakthroughs in vertex colorings that give rise to other colorings in a graph, such as graceful labelings of graphs that have been reconsidered under the language of colorings. The topics presented in this book include sample detailed proofs and illustrations, which depicts elements that are often overlooked. This book is ideal for graduate students and researchers in graph theory, as it covers a broad

range of topics and makes connections between recent developments and well-known areas in graph theory.
