1. Record Nr. UNINA9910254079903321

Titolo	Mathematical and Computational Approaches in Advancing Modern Science and Engineering / / edited by Jacques Bélair, Ian A. Frigaard, Herb Kunze, Roman Makarov, Roderick Melnik, Raymond J. Spiteri
Pubbl/distr/stampa	Cham : , : Springer International Publishing : , : Imprint : Springer, , 2016
ISBN	3-319-30379-1
Edizione	[1st ed. 2016.]
Descrizione fisica	1 online resource (XV, 806 p. 228 illus., 163 illus. in color.)
Disciplina	004
Soggetti	Computer mathematics Mathematical models Applied mathematics Engineering mathematics Biomathematics Computer simulation Physics Computational Science and Engineering Mathematical Modeling and Industrial Mathematics Mathematical and Computational Engineering Mathematical and Computational Biology Simulation and Modeling Numerical and Computational Physics, Simulation
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references at the end of each chapters and index.
Nota di contenuto	1 Theory and Applications of Mathematical Models in Physical and Chemical Sciences -- 2 Mathematical and Computational Methods in Life Sciences and Medicine -- 3 Computational Engineering and Mathematical Foundation, Numerical Methods and Algorithms -- 4 Mathematics and Computation in Finance, Economics, and Social Sciences -- 5 New Challenges in Mathematical Modeling for Scientific and Engineering Applications.

Sommario/riassunto

Focusing on five main groups of interdisciplinary problems, this book covers a wide range of topics in mathematical modeling, computational science and applied mathematics. It presents a wealth of new results in the development of modeling theories and methods, advancing diverse areas of applications and promoting interdisciplinary interactions between mathematicians, scientists, engineers and representatives from other disciplines. The book offers a valuable source of methods, ideas, and tools developed for a variety of disciplines, including the natural and social sciences, medicine, engineering, and technology. Original results are presented on both the fundamental and applied level, accompanied by an ample number of real-world problems and examples emphasizing the interdisciplinary nature and universality of mathematical modeling, and providing an excellent outline of today’s challenges. Mathematical modeling, with applied and computational methods and tools, plays a fundamental role in modern science and engineering. It provides a primary and ubiquitous tool in the context making new discoveries, as well as in the development of new theories and techniques for solving key problems arising in scientific and engineering applications. The contributions, which are the product of two highly successful meetings held jointly in Waterloo, Ontario, Canada on the main campus of Wilfrid Laurier University in June 2015, i.e. the International Conference on Applied Mathematics, Modeling and Computational Science, and the Annual Meeting of the Canadian Applied and Industrial Mathematics (CAIMS), make the book a valuable resource for any reader interested in a broader overview of the methods, ideas and tools involved in mathematical and computational approaches developed for other disciplines, including the natural and social sciences, engineering and technology. .
