

1. Record Nr.	UNINA9910254302303321
Titolo	Novel Methods in Computational Finance // edited by Matthias Ehrhardt, Michael Günther, E. Jan W. ter Maten
Pubbl/distr/stampa	Cham : , : Springer International Publishing : , : Imprint : Springer, , 2017
ISBN	3-319-61282-4
Edizione	[1st ed. 2017.]
Descrizione fisica	1 online resource (XVIII, 606 p. 194 illus., 93 illus. in color.)
Collana	The European Consortium for Mathematics in Industry ; ; 25
Disciplina	515.353
Soggetti	Partial differential equations Game theory Economics, Mathematical Computer mathematics Probabilities Partial Differential Equations Game Theory, Economics, Social and Behav. Sciences Quantitative Finance Computational Mathematics and Numerical Analysis Probability Theory and Stochastic Processes
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references and index.
Sommario/riassunto	This book discusses the state-of-the-art and open problems in computational finance. It presents a collection of research outcomes and reviews of the work from the STRIKE project, an FP7 Marie Curie Initial Training Network (ITN) project in which academic partners trained early-stage researchers in close cooperation with a broader range of associated partners, including from the private sector. The aim of the project was to arrive at a deeper understanding of complex (mostly nonlinear) financial models and to develop effective and robust numerical schemes for solving linear and nonlinear problems arising from the mathematical theory of pricing financial derivatives and related financial products. This was accomplished by means of financial

modelling, mathematical analysis and numerical simulations, optimal control techniques and validation of models. In recent years the computational complexity of mathematical models employed in financial mathematics has witnessed tremendous growth. Advanced numerical techniques are now essential to the majority of present-day applications in the financial industry. Special attention is devoted to a uniform methodology for both testing the latest achievements and simultaneously educating young PhD students. Most of the mathematical codes are linked into a novel computational finance toolbox, which is provided in MATLAB and PYTHON with an open access license. The book offers a valuable guide for researchers in computational finance and related areas, e.g. energy markets, with an interest in industrial mathematics.
