## Assessment and Policy Recommendations.

---

### Sommario/riassunto

This book provides a comprehensive understanding of public hospital reform in China, which is a hot topic for China's new round of health sector reform. The authors use rich data from both health provider side and service user side and conduct a cross-sectional study in China with some comparative analysis between different locations. It provides the audience with a big picture of China's public hospital and other components of health system as well. The book reviews the main policy measurements in the public hospital reforms and evaluates how these policies influence public hospitals' practices, especially on hospital governance and internal management.
