

1. Record Nr.	UNINA9910254525603321
Titolo	Endoscopic Surgery of the Lacrimal Drainage System / / edited by Livio Presutti, Francesco Mattioli
Pubbl/distr/stampa	Cham : , : Springer International Publishing : , : Imprint : Springer, , 2016
ISBN	3-319-20633-8
Edizione	[1st ed. 2016.]
Descrizione fisica	1 online resource (104 p.)
Disciplina	610
Soggetti	Otorhinolaryngology Ophthalmology Radiology
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	1 Anatomy of the lacrimal drainage system -- 2 Physiology of the lacrimal drainage system -- 3 Pathology of the lacrimal drainage system -- 4 Imaging of the lacrimal drainage system and interventional radiology -- 5 Epiphora and indications for surgery -- 6 Endoscopic dacryocystorhinostomy -- 7 Pediatric pathologies and indication for surgery -- 8 Dacryocystorhinostomy in revision surgery -- 9 Lacrimal Probe, Stent and Incanulation -- 10 Complication in lachrymal drainage system surgery.
Sommario/riassunto	This manual covers all aspects of endoscopic surgery of the lacrimal drainage system. Step-by-step descriptions are provided of endoscopic dacrocystorhinostomy (DCR) and its use in revision surgery, accompanied by numerous helpful photographs and anatomical drawings. In addition, clear flow charts are included to aid in diagnostic and surgical decision making and identify surgical indications. Essential information is provided on anatomy, physiology, and pathology, and an individual chapter is devoted to imaging of the lacrimal drainage system. Further topics include lacrimal probes and stents, potential complications of surgery, and endoscopic DCR in the pediatric age group. This book will assist the practitioner in negotiating the steep learning curve involved in gaining the skills needed to perform endoscopic surgery of the lacrimal drainage system, which offers

significant advantages in terms of avoidance of external incisions and maintenance of the lacrimal pump.
