

1. Record Nr.	UNINA9910254588503321
Autore	Putz Stefan
Titolo	Circuit Cavity QED with Macroscopic Solid-State Spin Ensembles // by Stefan Putz
Pubbl/distr/stampa	Cham : , : Springer International Publishing : , : Imprint : Springer, , 2017
ISBN	3-319-66447-6
Edizione	[1st ed. 2017.]
Descrizione fisica	1 online resource (XVIII, 124 p. 75 illus., 65 illus. in color.)
Collana	Springer Theses, Recognizing Outstanding Ph.D. Research, , 2190-5053
Disciplina	530.1433
Soggetti	Quantum computers Spintronics Superconductivity Superconductors Quantum physics Solid state physics Quantum Information Technology, Spintronics Strongly Correlated Systems, Superconductivity Quantum Physics Solid State Physics
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references at the end of each chapters.
Nota di contenuto	Part 1: Physical Principles -- Conned Electromagnetic Waves -- Spins in the Cavity--Cavity QED -- Part II: Experimental Realization -- Experimental Implementation--Solid-State Hybrid Quantum System -- Part III: Main Results -- Collective Spin States Coupled to a Single Mode Cavity--Strong Coupling -- Spin Ensembles and Decoherence in the Strong-Coupling Regime--Cavity Protection -- Engineering of long-lived Collective Dark States--Spectral Hole Burning -- Amplitude Bistability with inhomogeneous Spin Broadening--Driven Tavis-Cummings -- Spin Echo Spectroscopy--Spin Refocusing -- Conclusion and Outlook.
Sommario/riassunto	This thesis combines quantum electrical engineering with electron spin resonance, with an emphasis on unraveling emerging collective spin phenomena. The presented experiments, with first demonstrations of

the cavity protection effect, spectral hole burning and bistability in microwave photonics, cover new ground in the field of hybrid quantum systems. The thesis starts at a basic level, explaining the nature of collective effects in great detail. It develops the concept of Dicke states spin-by-spin, and introduces it to circuit quantum electrodynamics (QED), applying it to a strongly coupled hybrid quantum system studied in a broad regime of several different scenarios. It also provides experimental demonstrations including strong coupling, Rabi oscillations, nonlinear dynamics, the cavity protection effect, spectral hole burning, amplitude bistability and spin echo spectroscopy.
