Sommario/riassunto

Environment, Modernization and Development in East Asia critically examines modernization's long-term environmental history. Using local-level studies and the idea of co-production, it suggests new frameworks for understanding as inter-related processes environmental, social, and economic change across China and Japan. The volume opens up new points of comparison and exchange within East Asia and among East Asia, Europe, and North America. Environment, Modernization and Development in East Asia adds significant new perspectives to Chinese, Japanese, and global environmental history, as well as world history and development studies.
