and Romance -- Historical overview of stylistic fronting in Germanic and Romance -- Accounting for the differences and similarities between the languages under investigation -- Explaining the changes: minimalism meets von Humboldt and Meillet -- References.

Sommario/riassunto

This book presents a new perspective on the interaction between word-order and grammaticalisation by investigating the changes that stylistic fronting and oblique subjects have undergone in Romance (Catalan, French, Spanish) as compared to Germanic (English, Icelandic). It discusses a great deal of historical comparative data showing that stylistic fronting and oblique subjects have (had) a semantic effect in the Germanic and in the Romance languages, and that they both appear in the same functional category. The loss of stylistic fronting and oblique subjects is seen as an effect of grammaticalisation, where grammaticalisation is taken to be a regular case of parameter change. In contrast to previous and recent approaches to grammaticalisation, however, the author shows that it is not the loss of morphology that triggers grammaticalisation with subsequent word-order changes, but that the word-order change sets off grammaticalisation in the functional categories, which is then followed by the loss of morphology.

Nota di bibliografia	Includes bibliographical references at the end of each chapters and index.
Sommario/riassunto	Informal labour markets are prevalent in developing countries and these provide poor conditions of work and living for a large majority of the population. The papers in this book study economic development from the perspective of social justice and economic efficiency; exploring the role of land tenure and productivity in Indian agriculture. Junankar discusses the efficiency of small farms versus large farms, and the role of share-cropping tenancy. He provides a critique of neoclassical economics that assumes farmers maximize profits in competitive markets and argues that social and institutional conditions limit the conditions under which farmers operate in developing countries. Development Economics raises issues of poverty, inequality

and mobility of agriculturists. Junankar proposes different taxation principles on agricultural producers that would lead to a more efficient and equitable system; and this collection of essays also highlights the role of microfinance in helping the empowerment of women in poor countries.
