

1. Record Nr.	UNINA9910254981903321
Autore	van der Aalst Wil M. P
Titolo	Process mining : data science in action // by Wil M. P. van der Aalst
Pubbl/distr/stampa	Berlin, Heidelberg : , : Springer Berlin Heidelberg : , : Imprint : Springer, , 2016
ISBN	9783662498507 3-662-49851-0
Edizione	[2nd edition.]
Descrizione fisica	477 pages
Disciplina	004
Soggetti	Application software Information storage and retrieval Information technology Business—Data processing Software engineering Computer logic Information Systems Applications (incl. Internet) Information Storage and Retrieval IT in Business Software Engineering Logics and Meanings of Programs Computer Appl. in Administrative Data Processing Fouille de données Mémorisation des données Analyse des données Traitement des données open data data science text and data mining information storage and retrieval
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.

Nota di contenuto

Introduction -- Preliminaries -- From Event Logs to Process Models -- Beyond Process Discovery -- Putting Process Mining to Work -- Reflection -- Epilogue.

Sommario/riassunto

This is the second edition of Wil van der Aalst's seminal book on process mining, which now discusses the field also in the broader context of data science and big data approaches. It includes several additions and updates, e.g. on inductive mining techniques, the notion of alignments, a considerably expanded section on software tools and a completely new chapter of process mining in the large. It is self-contained, while at the same time covering the entire process-mining spectrum from process discovery to predictive analytics. After a general introduction to data science and process mining in Part I, Part II provides the basics of business process modeling and data mining necessary to understand the remainder of the book. Next, Part III focuses on process discovery as the most important process mining task, while Part IV moves beyond discovering the control flow of processes, highlighting conformance checking, and organizational and time perspectives. Part V offers a guide to successfully applying process mining in practice, including an introduction to the widely used open-source tool ProM and several commercial products. Lastly, Part VI takes a step back, reflecting on the material presented and the key open challenges. Overall, this book provides a comprehensive overview of the state of the art in process mining. It is intended for business process analysts, business consultants, process managers, graduate students, and BPM researchers.
